Jordan Ellis · Synthetic QA

Software Engineering Student

PUBLISHED REVIEWED PROFILE - SELF-REPORTED CLAIMS

Session: 3c0068e9-388d-4085-99c5-47b175e8b70c
Started: 2026-10-30T10:10:07.845Z (UTC)
Ended: 2026-10-30T10:17:33.291Z (UTC)
Profile revision: d05aa983-cfd4-4906-8a85-a10a99eb5249

Interview overview

2 recorded questions. This brief compiles the session’s checked AI answers and source references. It does not independently verify employment, authorship, competence, or hiring suitability.

Topics discussed

Backend APIs (1 recorded turn) | Databases (1 recorded turn) | Authentication (1 recorded turn) | Education & experience (1 recorded turn) | Architecture & projects (2 recorded turns) | Deployment (1 recorded turn)

Technical skills mentioned

Express (1 turn), Kubernetes (1 turn), PostgreSQL (1 turn)

Mention counts describe the conversation, including unsupported questions. They do not establish skill proficiency.

Questions asked

1. What supports this developer’s use of PostgreSQL, and is production Kubernetes experience established?

2. Does linking the Express repository establish that this candidate personally authored it?

Evidence-supported experience discussed

Jordan Ellis claims proficiency in PostgreSQL and reports using it in the 'Task Harbor' project, where they state they 'Used PostgreSQL transactions for task assignment.' [1] [2]

Linking the Express repository does not establish that Jordan Ellis authored it. The Express project identifies TJ Holowaychuk as the original author, with a documented list of contributors and a technical committee managing the project. [3] [4]

Areas that remain unverified

1. Production Kubernetes experience is not established in the provided profile or project details.

2. Personal authorship of the Express framework

3. Specific contributions to the Express codebase

4. Verification of the candidate's role in the Task Harbor project beyond their own claims

Suggested follow-up checklist

1. For the question “What supports this developer’s use of PostgreSQL, and is production Kubernetes experience established?”, ask the candidate for a project, source, or concrete example that clarifies: “Production Kubernetes experience is not established in the provided profile or project details.”.

2. For the question “Does linking the Express repository establish that this candidate personally authored it?”, ask the candidate for a project, source, or concrete example that clarifies: “Personal authorship of the Express framework”.

Useful next steps

Review the referenced material with the candidate. Ask them to explain their personal contribution, reproduce relevant technical decisions, and clarify the unresolved areas. This brief provides interview context, not a candidate ranking.
