Jordan Ellis · Fictional demo

Fictional full-stack developer · evidence walkthrough

FICTIONAL CANDIDATE - SAMPLE RESUME AND REAL PUBLIC REPOSITORY EVIDENCE

Session: 2145d6a8-8565-448a-a2ba-a909d1427dd0
Started: 2026-10-30T12:05:02.446Z (UTC)
Ended: 2026-10-30T12:11:43.694Z (UTC)
Profile revision: judge-demo-1c6f1b0fe400

Interview overview

2 recorded questions. This brief compiles the session’s checked AI answers and source references. It does not independently verify employment, authorship, competence, or hiring suitability.

Topics discussed

Databases (1 recorded turn) | Education & experience (1 recorded turn) | Architecture & projects (1 recorded turn) | Deployment (1 recorded turn)

Technical skills mentioned

Kubernetes (1 turn), PostgreSQL (1 turn)

Mention counts describe the conversation, including unsupported questions. They do not establish skill proficiency.

Questions asked

1. How was PostgreSQL used?
2. What about Kubernetes experience?

Evidence-supported experience discussed

In the Task Harbor project, Jordan Ellis used PostgreSQL transactions specifically for the purpose of task assignment. [1]

Jordan Ellis does not claim any experience with Kubernetes. The provided resume explicitly states that no Kubernetes experience is claimed. [2]

Areas that remain unverified

No explicit uncertainty was recorded by the assistant. This is not proof that every candidate claim was verified.

Useful next steps

Review the referenced material with the candidate. Ask them to explain their personal contribution, reproduce relevant technical decisions, and clarify the unresolved areas. This brief provides interview context, not a candidate ranking.
