FICTIONAL CANDIDATE - SYNTHETIC EVIDENCE

Session: 8bc49e86-6aa1-490d-869d-55c64ffcb2d7
Started: 2026-10-30T15:12:46.863Z (UTC)
Ended: 2026-10-30T15:13:05.699Z (UTC)
Profile revision: synthetic-demo-v1

Interview overview

3 recorded questions. This brief compiles the session’s checked AI answers and source references. It does not independently verify employment, authorship, competence, or hiring suitability.

Topics discussed

Databases (2 recorded turns) | Education & experience (1 recorded turn) | Architecture & projects (2 recorded turns) | Deployment (1 recorded turn)

Technical skills mentioned

PostgreSQL (2 turns), Prisma (2 turns), Kubernetes (1 turn)

Mention counts describe the conversation, including unsupported questions. They do not establish skill proficiency.

Questions asked

1. How does the sample Taskflow project use PostgreSQL and Prisma?
2. Can you expand on that project’s database choices and what the evidence establishes?
3. Does the available evidence establish production Kubernetes administration experience?

Evidence-supported experience discussed

The Taskflow project utilizes PostgreSQL managed through Prisma. The database schema incorporates User, Workspace, Membership, and Task models linked via foreign-key relationships, and it employs transactions for task creation and assignment operations. [1]

Areas that remain unverified

1. Specific implementation details of the Prisma client configuration
2. Database migration strategy used in the project
3. Performance metrics or indexing strategies for the PostgreSQL database
4. The provided evidence does not contain any information regarding Kubernetes administration experience.

Suggested follow-up checklist

1. For the question “Can you expand on that project’s database choices and what the evidence establishes?”, ask the candidate for a project, source, or concrete example that clarifies: “Specific implementation details of the Prisma client configuration”.

2. For the question “Does the available evidence establish production Kubernetes administration experience?”, ask the candidate for a project, source, or concrete example that clarifies: “The provided evidence does not contain any information regarding Kubernetes administration experience.”.

Useful next steps

Review the referenced material with the candidate. Ask them to explain their personal contribution, reproduce relevant technical decisions, and clarify the unresolved areas. This brief provides interview context, not a candidate ranking.

Supporting sources
